PROFESSIONAL SUMMARY

Computer Systems Engineer and Junior Full Stack Web Developer with experience building web applications, responsive interfaces, and REST API integrations. Specialized in JavaScript, React, HTML5, and CSS3, with knowledge of Node.js, Express.js, MongoDB, and Git. Developed web projects focused on creating intuitive user experiences, managing dynamic data, and optimizing interfaces across different devices. Previous experience in technical support and IT infrastructure strengthens my ability to diagnose issues, analyze requirements, and develop solutions focused on system stability and user needs.

TECHNICAL SKILLS

Languages: JavaScript | HTML5 | CSS3

Frontend: React | Responsive Design | **Component-Based Development**

Backend: Node.js | Express.js

Databases: MongoDB

APIs: REST APIs | API Integration and Consumption

Tools: Git | GitHub | Postman | VS Code

Others: Version Control | Troubleshooting | IT Infrastructure | Networking | Technical Support

PROFESSIONAL EXPERIENCE

Freelance Web Developer

Independent.

December 2025 – Present

- Design and develop responsive and interactive web applications using **React, JavaScript, HTML5, and CSS3**, focused on delivering clear and functional user experiences.
- Integrate and consume **REST APIs** to manage dynamic data and connect interfaces with external services.
- Manage the development lifecycle using **Git and GitHub**, maintaining an organized workflow and version control.
- Developed **StreamWhere**, implementing improvements to data flow and interface performance that resulted in a **15% performance improvement** and enhanced mobile navigation.
- Apply interface design principles, reusable components, and modular structures to improve application maintainability and scalability.

System Support | IT Infrastructure Project

H. Ayuntamiento de Agua Prieta

June 2025 – December 2025

- Provided hardware, software, and network support for **200+ users**, helping maintain the operational continuity of technology services.
- Participated in **network restructuring and server configuration projects**, contributing to improved infrastructure stability.
- Reduced user downtime by **8.6%** through preventive maintenance and efficient incident resolution.
- Diagnosed technical issues and followed incidents through resolution, strengthening problem-solving and analytical skills.

- Provided **first- and second-level technical support**, performing preventive and corrective maintenance on equipment and systems.
- Managed technology inventory and equipment assignments, maintaining accurate control of organizational IT assets.
- Regularized the technology asset inventory, reducing losses and improving internal asset control by **85%**.

FEATURED PROJECTS

Coffee Shop | 2026 GitHub: github.com/fredyalvarez/coffee_shop

- **Description:** Web application for a coffee shop designed to provide an e-commerce-like experience for browsing and selecting products, featuring categories, a dynamic menu, shopping cart, and product customization.
- **Stack:** React, JavaScript, CSS3, React Router, Context API, Git.
- **Features:** Category-based navigation, product search, size and add-on selection, shopping cart management using Context API, and reusable components.

StreamWhere | 2025 GitHub: github.com/fredyalvarez/tripleten_final_project_Movies_wheretowatch

- **Description:** Web application designed to help users discover movies and TV shows and find their availability across different streaming platforms through a dynamic and user-focused interface.
- **Stack:** React, JavaScript, HTML5, CSS3, REST APIs, Git.
- **Impact:** Improved interface performance by **15%**, along with enhanced navigation and user experience on mobile devices.

Around USA | 2025 GitHub: https://github.com/fredyalvarez/web_project_api_full

- **Description:** Full-stack social media web application for sharing photographs of visited places. Users can create and manage photo cards with images and descriptions, edit their profiles, interact through likes, and manage their own content.
- **Stack:** React, JavaScript, Vite, React Router DOM, CSS3, Node.js, Express.js, MongoDB, JWT, bcryptjs, REST API, Git.
- **Features:** User authentication and authorization using JWT, public and private routes, complete CRUD functionality for cards and user profiles, and database integration with MongoDB.

EDUCATION

Bachelor's Degree in Computer Systems Engineering | Instituto Tecnológico de Agua Prieta 2016-2020

CERTIFICATIONS & ADDITIONAL TRAINING

Full Stack Web Development Bootcamp | TripleTen
Introduction to Angular Course | Learning.CARE

2025- 2025
2020

LANGUAGES

Spanish (Native) | English (C1 – Advanced) | Korean (A2 – Basic)
